

GreenGPT Product Workflow

A one-page path for checking whether the EHS compliance calendar is useful enough to keep building around.

Test goal: Does the free experience help a facility team move from spreadsheet-style deadline tracking to a clearer, profile-based compliance calendar?

Test Workflow

- 1 Open the product and start free.**
Go to greengptadvisory.com and choose the free calendar workflow.
- 2 Enter a realistic facility profile.**
Select the closest industry, jurisdiction, and free facility flags: hazardous materials, air permits, wastewater/NPDES, or hazardous waste generation.
- 3 Generate the compliance calendar.**
Review the obligations, timing, frequency, authority, and citation context.
- 4 Judge trust and usefulness.**
Would an EHS manager understand why each item appears? Are the results specific enough to prompt action?
- 5 Send focused feedback.**
Share what worked, what felt wrong or missing, and whether this would save time compared with your current process.

Free Version Scope

Included: federal EHS calendar generation, core facility flags, obligation names, due timing, frequency, authority, and citation context.

Not required for this test: Pro features such as state-specific rules, additional hazard flags, .ics export, email reminders, CFR citation links, and document attachments.

Feedback Prompts

- ☐ Did the workflow make sense without explanation?
- ☐ Did the generated calendar surface obligations you would actually review or act on?
- ☐ Were any deadlines, labels, or assumptions unclear, wrong, or too generic?
- ☐ Would this save time compared with your spreadsheet, reminders, or manual research?
- ☐ What one feature would make you more likely to keep using it?

Most useful feedback includes: industry, state, facility type, what you selected, what appeared, and what you expected instead.
